DETAILED ACTION

Election/Restrictions

Upon careful review of the amendment, a restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claims 28-34, drawn to a combination, a grinding machine with an anvil having a solid construction that includes a wedge portion receiving the impact of the grinding drum, classified in class 241; and
- Group II. Claims 12-17 and 35-36, drawn to a grinding machine with an anvil, classified in class 241.

The inventions are distinct, each from the other because of the following reasons:

Invention of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed as evidenced by claim 28. For example, claim 12 of the subcombination requires the second reference point of the tapering surface being located farther from the axis of rotation than the first reference point while the combination does not. The subcombination has separate utility such as it can obviously be used in any grinding machine and is not limited to the particular grinding machine of Group I.

A telephone call was made to the attorney of record, Karen Fitzsimmons, on January 6, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
